How to use Mitasu Oil catalogue

This Catalogue contains recommendations for use of oils and special fluids produced by Mitasu Oil Corporation, Japan. The main part of the Catalogue contains recommendations for vehicles made for Japanese domestic market between January 2006 to May 2014. These recommendations are based on data provided by either manufacturers (for Japanese cars) or their official representatives in Japan (for imported vehicles).

The section Foreign Cars has more specific recommendations for some car models made by EU, USA, South Korean and Russian manufacturers that are also used worldwide.

The information in this Catalogue is applicable to series-produced vehicles. Designed as a reference tool only, it should not be considered as primary recommendation. For complete and accurate information about the types and amounts of automotive lubricants and special fluids to be used, as well as the information on chassis and engine models, year, specifications and other technical features of your vehicle, please refer to the manufacturer's manual, registration documents and other official sources

The oil and special fluid change interval is determined by the vehicle manufacturer. The information on service intervals provided in this Catalogue and other materials published by Mitasu Oil Corporation, Japan in one form or another is a recommendation only. The filling amounts of fluids specified here have been provided to Mitasu Oil Corporation, Japan by third parties.

Mixing MITASU products between themselves and with products of other manufacturers can result in poorer characteristics. If the fluid cannot be replaced completely, for example - for servicing automatic transmissions or continuously variable transmissions, we recommend at least double fluid replacement by draining - filling at least every 100 km.

All recommendations in this Catalogue apply exclusively to products manufactured by Mitasu Oil Corporation, Japan based on their performance and are not applicable to similar products of other manufacturers.

For more information on product application and for any questions on how to use the MITASU Catalogue, contact the Customer Support Centre on info@mitasuoil.com or an authorized dealer of Mitasu Oil Corporation, Japan in your region.

Abbreviations, symbols and notes used in the Catalogue.

- the column **MODEL**:

VIN № - recommendations for models sold outside of Japan.

Frame № - recommendations are applicable to models sold in Japan.

- the column **YEAR**:

Specifies the periods of model production. For some markets these dates may vary.

- the column **DRIVINGWHEELS**:

Indicates the number of driving wheels

- the column **EQUIPMENT**:

If the line starts with a slash (/) – this car package has no special name.

In the text: the slash (/) separates the names or the changing parts of the package, depending on interior equipment, body and attachments, but with a common platform. For example, Standard Van Deluxe /

Standard Van Super GL / GL-E corresponds to:

Standard Van Deluxe, Standard Van Super GL,

Standard Van Super GL-E

G / L Touring corresponds to: G Touring, L Touring

- the section **ENGINE**

- the column **MODEL**

The slash (/) separates modifications of the same engine distinguished by structural differences and, consequently, different letter indices, provided that the recommended lubricants and the filling amounts are the same. For example, HD-C/-E corresponds to HD-C, HD-E

HB - horizontally positioned engine block (row) (the abbreviation is used where the manufacturer requires to specify this engine feature)

MIVEC - Mitsubishi Innovative Valve timing Electronic Control system - a variable valve timing system with an electronic control developed by Mitsubishi Motors (the abbreviation is used where the manufacturer requires to specify this engine feature)

Turbo – turbo engine (the abbreviation is used where the manufacturer requires to specify this engine feature)

- the column DISPLACEMENT:

engine capacity in cm³; the values are rounded to 100 cm³

- the column CAPACITY L.

Specifies the required volume of engine oil

The slash (/) separates the filling volumes if the engine oil system can have external structural elements (for example, oil cooler), the presence or absence of which adjusts the amount of oil required for replacement.

Recommendations in the OIL TYPE section are divided as follows:

Section OIL TYPE has two columns with recommendations - PREMIUM and CLASSIC, as well as NOT RECOMENDED, which indicates the viscosity of engine oils that are not recommended for use in engines of cars in this configuration. The column PREMIUM lists products offering an extra quality margin and/or exceeding the requirements of the vehicle manufacturer.

PREMIUM 2 options	CLASSIC 2 options
----------------------	----------------------

Effective solution. Cars with a mileage under 100,000km driven under normal conditions. Excellent engine protection	Economic solution. Adequate engine protection
Effective solution. Cars driven under severe conditions and/or with a mileage of over 100,000km. Maximum engine protection	Economic solution. Cars driven under severe conditions and/or with a mileage of over 100,000km. Adequate engine protection.

PREMIUM 2 options	CLASSIC 2 options
----------------------	----------------------

Effective solution. Cars with a mileage under 100,000km driven under normal conditions. Excellent engine protection.	Economic solution. Cars with any mileage driven under normal or severe conditions. Adequate engine protection.
Effective solution. Cars driven under severe conditions and/or with a mileage of over 100,000km. Maximum engine protection.	

() – Dry fill Lube Capacity - initial fill volume

The symbol is used if the manufacturer specifies the filling amount within the range of X to Y litres.

drain interval up to 15,000 km - product features allow to extend the drain interval to up to 15,000 km.

N/D – No Data

If one of the columns (PREMIUM or CLASSIC) in the OIL TYPE section has two cells with recommended products, the product in the bottom cell always offers a higher degree of protective properties but less fuel efficiency.

PREMIUM 1 options	CLASSIC 2 options
----------------------	----------------------

Effective solution. Cars with any mileage driven under normal or severe conditions. Maximum engine protection	Economic solution. Cars with any mileage driven under normal or severe conditions. Adequate engine protection.
---	--

- the section **TRANSAXLE**

- the column **TYPE**

AT – Automatic Transmission

AMT – Manual transmission with automatic gear change (robotic)

CVT – Continuously Variable Transmission

DCT – Dual Clutch Transmission

MT – Manual Transmission

the column **CAPACITY L.** specifies the required volume of transmission fluid

The symbol is used if the manufacturer specifies the filling amount within the range of **X** to **Y** litres

The slash (/) separates the filling volumes if the transmission can have external structural elements (for example, oil cooler), the presence or absence of which adjusts the amount of fluid required for replacement, or the volumes are given for different transmission models (refer to notes at the bottom of the page)

Clutch part / transmission part - filling volumes for the clutch/ transmission

() – Dry fill Lube Capacity – initial fill volume

/ – Dual Range – filling volume for dual range transfer case

FFL – Filled For Life – the transmission fluid is filled for the life of the car

FR/RR – for Toyota and Lexus hybrid four-wheel drive vehicles - the filling volume for the front and rear transmissions respectively

Recommendations in the **FLUID TYPE** section are divided as follows

PREMIUM	CLASSIC
Effective solution. Vehicles with any mileage operating under normal or severe conditions. Improved anti-vibration resistance performance. Extended change interval.	Economical solution. Vehicles with any mileage operating under normal or severe conditions. Standard change interval. !!! Each category may have two product options.

- the section **GEAR OIL TYPE:**

the symbol is used if the manufacturer specifies the filling amount within the range of X to Y litres.

/ – free wheel clutch – volume of fluid in the freewheel clutch

() – initial fill volume

() – with PTO – the volume of liquid if the transfer case is equipped with PTO (Power Take Off), for example, for the operation of a motor winch

actuation / DF – the filling volume and type of fluid for the actuator / differential

Helical LSD attached – this model modification can be equipped with a helical self-locking differential

Hydraulic actuation/Durashift - filling volumes for hydraulic actuation/transmission

N/D – No Data

() – Service Fill – specifies the amount of oils or liquids filled when servicing vehicles

SP – Special Product – only the original product can be used as prescribed by the manufacturer

5 speed / 6 speed or 5SPD/6SPD – filling volumes for five - and six-speed transmissions respectively

Blocked differential – this model modification can be equipped with a forced locking differential

Haldex-clutch – specifies the filling amount for the Haldex clutch

LD system Attached – this model modifications can be equipped with a self-locking differential

LSD attached / Mechanical LSD attached – this model modifications can be equipped with a limited-slip differential

N/D – No Data

Part Time / Multy Mode or NV231/NV242 – the filling volume for the relevant type of transfer case

SH-4WD system - four-wheel drive system available on some models of Honda and Acura. The additional column TF shows the amount of transmission oil in the interaxle differential. The additional columns REAR DF / CLUTCH and REAR DF / HYPOID specify the amount of transmission fluid in the clutch chamber in the rear differential and in the hypoid chamber in the rear differential respectively.

FRONTDIFF. front differential / axle / reducer	TRANSFERBOX Inter axel differential / transfer case / angle gear reducer	REARDIFF. rear differential / axle / reducer
MJ product №	MJ product №	MJ product №
the required amount of transmission oil or fluid	the required amount of transmission oil or fluid	the required amount of transmission oil or fluid
